FIRE SAFETY CURTAINS

We manufacture all kind of fire safety curtains that complies whit fire codes depending of the country of installation, plase contact us for a complete system quotation. Our smoke and fire curtains are made to measure to your specific requirements

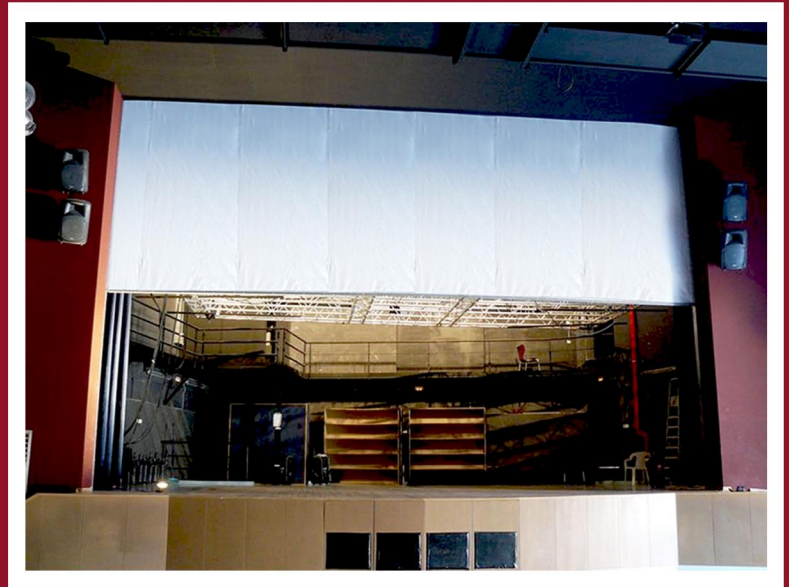

TEXTILE FIRE CURTAINS

Fire Safety Curtains are manufactured for installation in auditoriums, schools, and theaters around the world. Our Brail, Straight Lift, Trip or Steel Frame Curtains can be manufactured to almost any custom size or specification. All curtains are available with Yield Pads and Smoke Seals.

Most if not all local, state and government municipalities require a proscenium fire safety curtain that can be operated on an automatic or manual basis once installed. In the event of a fire, once lowered, these curtains are required to provide a flame, heat, and smoke barrier between the auditorium and stage areas. The barrier allows time for safe evacuation of the audience while also helping in overall fire containment.

Our curtains are made from an exclusive and proprietary material, is Non-Asbestos curtain fabric is made from 100% glass yarns and has been treated with a proprietary compound that enables it to withstand exceedingly high temperatures. When exposed to a 2000-degree flame test, showed no flame penetration, passage of smoke, or glow to the opposite side after 30 minutes.

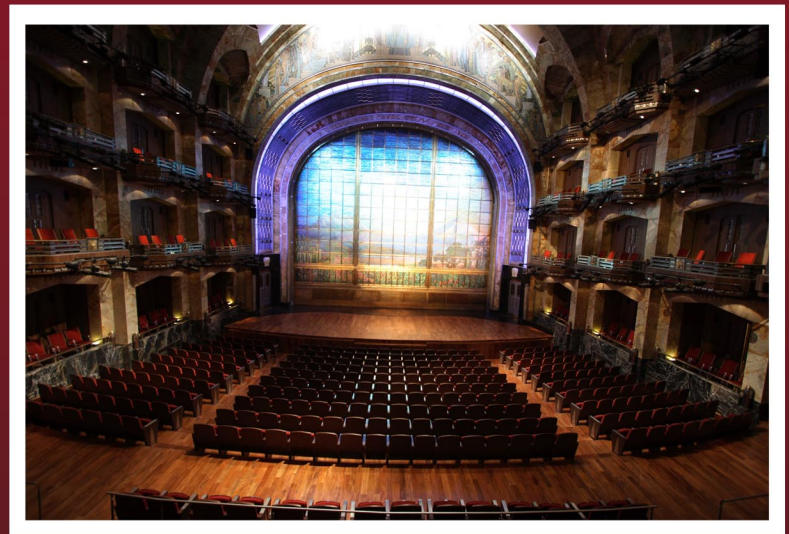

- **Weight: 40 ounces per square yard (approximately)**
