MODULAR PLATFORM

STAGE SETS

Modular Platform with variable millimetric height

- The upper frame is realized with an upper perimetrical aluminium profile and central transverses.
- A mechanism with jackscrews transmits the vertical movement to four articulated legs and permits the variable millimetric height.
- Four feet can compensate, up to 50 mm, the possible floor unevenness and are complete of hooking to the surrounding platforms.
- The control is easily obtained by a standard electric or battery screwdriver inserted into the central hole of the floor.
- Wood floor of different types available.

Dimensions:

240x120 cm height up to 1100mm

200x100 cm height up to 1000mm

Vertical movement also of the closing folding panels.

Control of vertical movement by means of a standard electric or battery screwdriver, introduced into a small central hole in the floor.
